Rioned

Setting the standard

Rioned develops, produces and sells a complete range of drain and sewer cleaning equipment. The range includes cleaning, detection and inspection systems for small and medium-sized drains/sewers.

The international brand names, Rioned and Rior stand for innovative products, high quality and very good after sales service.

We have been the leaders for 50 years.

INTERNATIONAL

We are considered as the European market leader. As well as our own sales departments in the Netherlands, Belgium and France, we have a world wide network of qualified partners. Our foreign partners have excellent knowledge of the local market and can advise you perfectly on the choice of the correct equipment. Users all over the world have confidence in the Rioned equipment.

INNOVATION

The continuous dialogue with professional users, results in experience and ideas, which are turned into further product improvements and developments. Our products have an innovative reputation. Rioned was the first manufacturer to manufacture a high pressure jetting machine with pivoting hose reel. Rioned introduced the Riopulse pulsator system, was the leading company to develop light weight, compact and noise damped equipment. Our latest innovation is a patented 180° pivoting high pressure hose reel. Optimal working machines and user-friendliness are important features of Rioned equipment.

HIGH QUALITY

Reliability and durability of the products comes first. During development and composition of the machines, we choose high quality components, which guarantee a long lifetime. Our engines and our pumps are supplied with reserve capacity, which can be applied in extreme situations. Obviously this leads to less fuel consumption, lower noise levels and less wear, resulting in lower operational and maintenance costs. The Rioned quality system meets the latest ISO-9001:2000 standards and all equipment is produced in accordance with CE-regulations.

Products

Spring machines

The product group of spring machines consists of manual and electrical drum- and suitcase spring machines for the professional cleaning of drain and sewers from \varnothing 12 mm up to \varnothing 250 mm. The automatic spring feed unit ensures, in combination with the perfect cleaning springs, the solution for all drain and sewer cleaning problems. Our springs have the unique Rioned spring coupling system which combines reliability with user friendliness when connecting/disconnecting accessories. Furthermore all the springs contain the blue Riorcore® steel wire with a plastic coating which makes the spring stronger and improves the cleaning power.

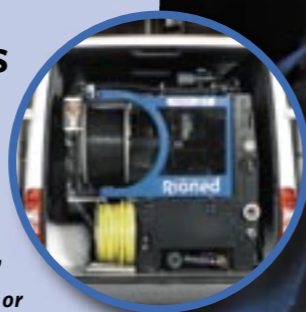

Combination units

The gully suction and combination jetting units complete the Rioned manufacturing program of drain and sewer cleaning equipment. These units are used for collection and transport of waste, as well as for cleaning and maintenance of sewer and drainage systems. In large towns, there are more and more problems with accessibility to narrow streets with large vehicle-mounted units. With this in mind, Rioned has concentrated on developing small, compact units, which are very useful for jetting and cleaning of drains and sewers, emptying grease separators, septic tanks, street wells and for collection and transport of waste. These units are fully adapted to the client's specification.

High pressure jetting machines

The product group high pressure jetting machines are specifically designed for the unblocking and cleaning of drains and sewers. Rioned knows from many years experience that an appropriate combination of pressure and water flow is of decisive significance for optimal drain and sewer cleaning. The diameter of the hoses, pipes and feed bearings are chosen to such ensure that the maximum amount of water can flow through the machine and hose and will not be reduced by unnecessary obstructions. These high pressure jetting machines are supplied as jetting trailers or skid mounted jetting machines, with or without PTO drive.

Inspection systems

As well as the well-known product groups for drain and sewer cleaning Rioned also offers a product group inspection/detection. The Rioned Cam Systems are durable, high quality inspection systems and can be used for inspection of drains, sewers, septic tanks, drainage pipes, ventilation shafts, chimneys etc. As from today problems like cracks, sinking, roots and leaks are history.
