

MARENIUS

# NOISEBOX®

*A family of products that effectively and securely protects your meetings against eavesdropping and recording via mobile phones.*

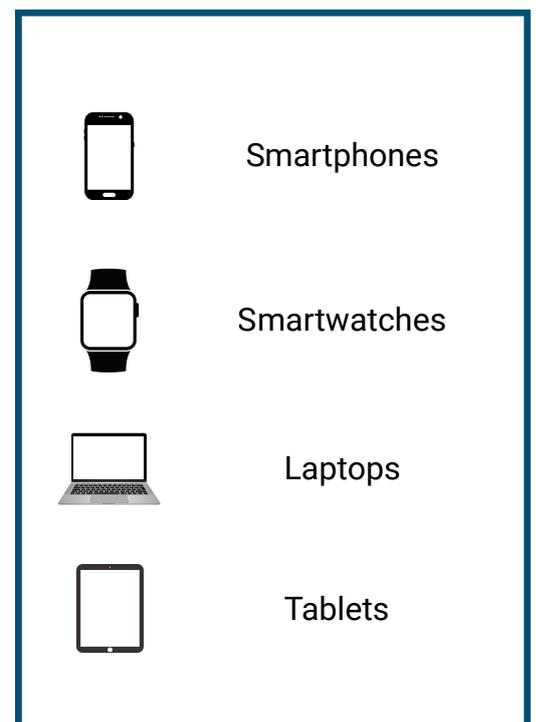

NoiseBox is a Marenius product that was developed in collaboration with the Swedish Armed Forces and the Swedish Police to meet the need for a portable device that could protect against spying via mobile applications during interrogations and confidential conversations. NoiseBox products are made of solid wood and handcrafted in Sweden. The device is used in Finland and Sweden by numerous government and public sector organizations.

## How does it work?

NoiseBox has integrated speakers with specially developed electronics that produce completely random, wide-spectral acoustic noise. This noise effectively blocks the microphone in phones or other audio-recording devices placed inside the NoiseBox.

The camera function is effectively blocked by it being completely dark inside the box. This eliminates the need for users to surrender their phones during confidential calls, and meetings can be held securely without the risk of interception via the devices placed inside the NoiseBox. If you like, the phones can also be charged while in the NoiseBox via either 2 or 4 USB ports inside the device.

All Noisebox-models have USB-ports for charging devices during use.

Standard colour: beech

Available variations (depending on the model): beech, oak, birch and black oak.

Manipulation protection (Model **S1+**) provides the absolute highest level of security in the NoiseBox family. If attempts at manipulation are made, protection will be activated and the NoiseBox will emit an alarm signal. The NoiseBox can then only be restored by sending the device to Marenilus for inspection.

Portable use guarantees the privacy of your conversations anywhere, anytime. NoiseBox **P1** is built to withstand both wet and demanding environments. The case is IP 67 rated and constructed of impact-resistant polypropylene, which is extremely resistant to high-intensity impact.

## Different NoiseBox models
